DETAILED ACTION

The Applicants Amendments to the claims received on 8/30/2007 is acknowledged. The text of those sections of Title 35 U.S. Code not included in the action can be found in the prior office action. Rejections or objections not addressed in this office action with respect to the previous office action mailed 3/20/2007 are hereby withdrawn.

Claim(s) 60-74 are pending. Applicants have cancelled claim(s) 1-59.

Newly submitted claims 60-74 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: R and R₁, for example, are not defined as in the prior claim set and change the nature of the invention. Upon further consideration of the cancelled claims and the newly submitted claims, the Examiner is requiring a new Election/Restriction requirement.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 60-72 drawn to a water soluble thioester or selenoester compound.

Group II, claim(s) 73-74 drawn to a method of cleaving a thioester or selenoester compound.

Art Unit: 1654

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: They are not linked by a special technical feature.

The expression "special technical feature" refers to those features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. Thus, a feature found in the prior art cannot be considered to be a special technical feature. Because the Compounds of Group I is known in the art by reference Sasaki & Koga "Multi-functionalized chiral crown ethers as enzyme models for the synthesis of peptides. Multiple chiral recognition in the enzyme model," J. Inclus. Phen. Mol. Recog Chem., 1989, 7,267-76, made of record in the previous office action, it cannot be considered a special technical feature. Compound 11, on page 269, reads on Y being a peptide linked to a group compatible with a thioester.

Further, the species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Pursuant to PCT Rule 13.2 and PCT Administrative Instructions, Annex B, Part 1(f)(I)(B)(2), the species are not art-recognized equivalents. The Amino Acid of Y is not an art recognized equivalent of a Peptide, which is not an art recognized equivalent of a Polypeptide, and do not share a common core structure.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Peptide, Amino Acids, and Polypeptides.

Water Soluble polymers.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. That is, Applicant is required to elect a single embodiment wherein all variable are particularly defined. The reply must also identify the claims readable on the elected species,

Art Unit: 1654

including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: nearly all claims are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Pursuant to PCT Rule 13.2 and PCT Administrative Instructions, Annex B, Part 1(f)(I)(B)(2), the species are not art-recognized equivalents.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
